Cautious to Balanced Investor

*You don't seek risky investments
but don't avoid them either.*

Your aim is a longer term return.

*You accept modest yet frequent
fluctuations in value and the
risk of a moderate loss.*

*Potential return of 21.45%
& maximum loss of -13.27%*

BALANCED INCOME PORTFOLIO

EDITION 26 January 2017

The Balanced Income Portfolio is a value style strategy. It is aimed at medium to long term investors who are seeking a sustainable level of income within a balanced portfolio along with a genuine prospect of income & capital growth.

The chosen investment funds can invest in UK and overseas equities, commercial property, cash and fixed interest securities. They are actively managed by leading fund managers to maximise total return whilst maintaining control of risk.

The Balanced Income Portfolio performance is benchmarked against the average performance of the IA Mixed Investment 20%–60% sector. The Balanced Income Portfolio has a risk rating and investor profile of 4 out of 10.

Prospective Risk Level

Historic Risk Level

A **risk level 4** investor should be prepared to accept annual returns somewhere **within the range of a -13.27% loss and a 21.45% gain** — returns within this range would be expected 95% of the time. It should be remembered that there is a 5% chance that **risk level 4** portfolios will experience an annual return outside this range — this means an investor may experience **losses greater than -13.27% or gains greater than 21.45%** at some point(s) during their investment in one year.

Range of Returns

Upper Return

21.45%

In 95 years out of 100, this is the highest expected level of return for a given level of risk. There is a 2.5% chance that returns could fall outside the upper return figure in one year.

Average of All Returns

4.09%

This is the average of all possible returns within a risk level in one year.

Lower Return

-13.27%

In 95 years out of 100, this is the lowest expected level of return for a given level of risk. There is a 2.5% chance that returns could fall outside the lower return figure in one year.

It is important to remember the figures are not intended to be and should not be taken as a projection of the likely returns from the portfolio risk levels. This is intended to support the risk discussion between an adviser and a client following the completion of a risk profile questionnaire. They show the implied volatility and mean expected return of risk levels 1 to 10 to two standard deviations in one year (ie all returns are expected to be between these extremes in 95 years out of 100; this is often described as a 95% confidence level). The figures shown are the expected arithmetic average returns and the ranges assume that returns are based on a log normal distribution. Figures are shown net of tax and underlying manager fees.

*Maximise your returns with
a level of risk you're entirely
comfortable with*
