CONSERVATIVE PORTFOLIO

EDITION 38 January 2023

RISK

ESTATE **#**CAPITAL

Cautious to Balanced Investor

You don't seek risky investments but don't avoid them either. Your aim is a longer term return. You accept modest yet frequent fluctuations in value and the risk of a moderate loss.

Potential return of 20.73% & potential loss of -10.75%

EDITION 38 January 2023

CONSERVATIVE PORTFOLIO

The Conservative portfolio is a blended growth strategy holding equal passive and actively managed funds. It is aimed at medium to longer term investors, who seek above average capital growth from a cautious to balanced risk portfolio at a competitive cost.

The chosen investment funds can invest in UK and overseas equities, commercial property, commodities, fixed interest securities, alternative investments and cash. They are managed by leading fund managers to maximise total return whilst maintaining control of risk.

The Conservative Portfolio performance is benchmarked against the average performance of the IA Mixed Investment 20% - 60% sector, has an equity content of around 40% and risk profile of 4 out of ten.

RISK

Potential return of 20.73% & potential loss of -10.75%.

Risk

A **risk level 4** investor should be prepared to accept annual returns somewhere **within the range of a -10.75% loss and a 20.73% gain** — returns within this range would be expected 95% of the time. It should be remembered that there is a 5% chance that **risk level 4** portfolios will experience an annual return outside this range — this means an investor may experience **losses greater than -10.75% or gains greater than 20.73%** at some point(s) during their investment in one year.

It is important to remember the figures are not intended to be and should not be taken as a projection of the likely returns from the portfolio risk levels. This is intended to support the risk discussion following the completion of a risk profile questionnaire. They show the implied volatility and mean expected return of risk levels 1 to 10 to two standard deviations in one year (ie all returns are expected to be between these extremes in 95 years out of 100; this is often described as a 95% confidence level). The figures shown are the expected arithmetic average returns and the ranges assume that returns are based on a log normal distribution. Figures are shown net of tax and underlying manager fees.

Range of Returns

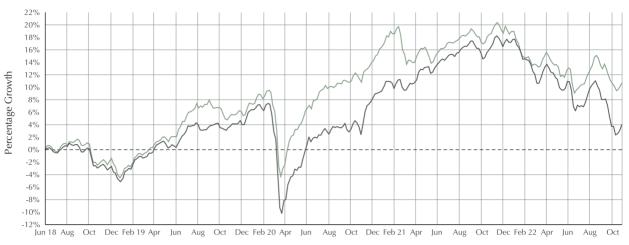

Upper Return	20.73%	In 95 years out of 100, this is the highest expected level of return for a given level of risk. There is a 2.5% chance that returns could fall outside the upper return figure in one year.
Average of All Returns	4.99%	This is the average of all possible returns within a risk level in one year.
Lower Return	-10.75%	In 95 years out of 100, this is the lowest expected level of return for a given level of risk. There is a 2.5% chance that returns could fall outside the lower return figure in one year.

Cumulative Performance Chart

Powered by data from FE fundinfo

The performance tables and charts are produced by data from Financial Express Analytics. The tables and charts are a proxy to our actual portfolio performance as they do not include adviser, manager and platform charges nor accurately reflect the actual dates that individual investor portfolios are rebalanced from one edition to another. The rebalance lag could amount to 8 weeks per rebalance. The proxy portfolio performance reflects the fund selection in each consecutive edition of our portfolios.

Cumulative performance chart shows % growth from 01/06/2018 to 31/10/2022 calculated using bid prices with income re-invested into the fund net of tax. The following tables and charts illustrate the overall performance of the portfolio against its benchmark. The cumulative chart illustrates the overall performance over a maximum of five years dependant on the age of the portfolio and the table shows the overall performance broken down into specified periods. The discrete table and chart illustrates how the portfolio has performed against the benchmark during whole calendar years. All performance is to the latest month end and in GBP.
